

## Extreme Case 2: Full Search Space

Vocabulary size = 100, explore ALL paths

Step 0: 1 nodes

Step 1: 100 nodes

Step 2: 10,000 nodes

Step 3: 1M nodes

Step 4: 100M nodes

Total paths:  $100^5 = 10 \text{ billion}$

If 1  $\mu\text{s}$  per path:  
 $10 \text{ billion} \times 1 \mu\text{s} = 2.8 \text{ hours}$

If 1 ms per path:  
 $10 \text{ billion} \times 1 \text{ ms} = 115 \text{ days!}$
